Overcoming Disruption

IntelligIS, Inc.

Enabling the modern workforce to work from anywhere.

Problem

At the height of the pandemic, **two-thirds** of Americans were forced to work from home with little to no preparation. Now that we are reopening the economy, the need to work remotely will remain. Companies now understand that a robust remote access solution is paramount. The solution needs to:

- Provide a great user experience
- Allow employees to work from anywhere and from any device
- Secure their data and workforce

Process

Before implementing remote work capabilities for clients, we walk through a series of steps

Assess

- Assess client's current technology environment

Align

- Identify gaps and align technology solutions to fill them

Design

- Design the solution

Implement

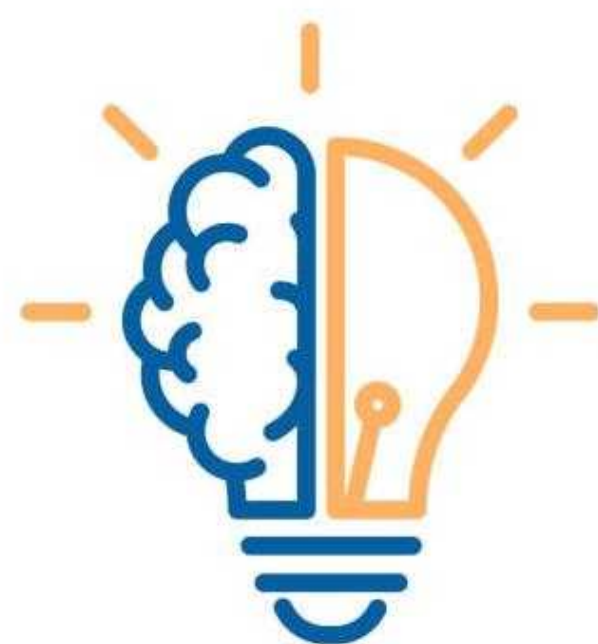

- Deploy solution using industry best practices

Improve

- Continuously optimize the client's environment

Benefits: Increased productivity. Great user experience.

Solution

IntelligIS provides a robust Virtual Desktop Infrastructure solution which provides employees, contractors, and vendors remote access to company applications and resources. Security technologies such as endpoint detection and response (EDR) and multi-factor authentication (MFA) are employed to protect company assets and their workforce.

Our Company

IntelligIS, Inc. is an Atlanta-based IT Services firm that aims to deliver best-in-class services and support and to be a trusted advisor on technology trends and solutions for each one of our clients.
